

# E30 Testimonial

My husband and I are both long time E30 supporters. We own a 2001 Chevy Tahoe (a non-flex fuel vehicle) and have always ran it with only a E30 blend. Even before the E30 pumps were put in we blended a ratio of E85 and E10. I have found the performance is better (quicker and more power) and the gas mileage stays the same or better. The cost savings of using E30 is a definite advantage also. I drive it to work in Watertown, SD (apx. 70 miles a day). We service it regularly, every 4-5,000 miles (original motor and transmission).

This 15 year old 2001 Chevy Tahoe has just turned **202,000 miles!!!!**  
If the EPA needs more proof to put their stamp of approval on higher blends in standard vehicles, then here you go. Please use this for proof in your data tests. I love my Tahoe and I thank E30 for protecting it, and our environment for many more miles and years to come.

Thank you,  
Sandra Smith
